

Hiring Committee
Divergent
Torrance, CA

Dear Hiring Committee,

I am writing to express my interest in the Data and Process Analytics Intern position at Divergent for Summer 2026. My hands-on experience with Python data processing, ETL pipeline development, dashboard building, and analytical modeling, combined with my academic work in Business Analytics, makes me enthusiastic about contributing to Divergent and the development of the Divergent Adaptive Production System.

During my Data Analytics Internship at Guardian Insight Group, I built and maintained Python and MySQL ETL pipelines to clean, structure, and transform large datasets. I also created dashboards and reporting tools to support operational decision making. This work strengthened my ability to take raw data and convert it into clear and actionable insights. These skills align directly with the tasks involved in capturing and organizing factory data for simulation and decision support.

My academic projects, including the German Credit machine learning analysis and the Poison Control therapeutic error study, required extensive use of Python libraries such as pandas, NumPy, and matplotlib. I used these tools for data preparation, feature engineering, model evaluation, and technical documentation. These experiences developed my understanding of process behavior, system variation, and quantitative interpretation, which are important for supporting model calibration and parameter estimation for discrete event simulation.

In my current role in the Registrar's Office at Loyola Marymount University, I manage and validate large institutional datasets across multiple systems. I have strengthened my attention to detail, documentation habits, and ability to follow precise workflows. I regularly troubleshoot data inconsistencies and ensure the accuracy and completeness of student records. This work prepared me well for the data workflow documentation and process-focused responsibilities described in this internship.

I am highly motivated by the possibility of applying my analytical background in a real manufacturing environment, especially within a company that is advancing how vehicle structures are engineered and produced. The opportunity to support simulation tools, structured data pipelines, and analytics-driven decision support is a perfect fit for my interests and technical skills.

Thank you for considering my application. I would welcome the chance to bring my programming experience, data handling abilities, and interest in manufacturing systems to the team at Divergent. I look forward to the opportunity to discuss how I can contribute this summer.

Sincerely,
Josh Tsutaoka
